FIELD LEVEL NOTES

Section Number: Main

Field Name: FedAllocExpended Row Name: Federal Allocation Column Name: Expended

Year: 2003 Field Note:

As reported previously, the budget period has been transitioned from a federal fiscal year to a calendar fiscal year. Consequently, the annual reporting of budgeted, encumbered and expended monies through September 30th is misleading in that we actually have another three months remaining in our calendar year budget cycle so expenditures will appear less than they should while remaining money will appear greater.

FIELD LEVEL NOTES

Section Number: Main

Field Name: SickleCellDisease_Confirmed

Row Name: SickleCellDisease Column Name: Confirmed Cases

Field Note:

The test for Sicklle Cell Disease is a very good test and there are very few, if any, false positives.

Section Number: Other Screening Types

Field Name: Other Row Name: All Rows Column Name: All Columns

Year: 2006 Field Note:

For newborn hearing screening, data reported are estimated based on 41 out of 45 birthing hospitals. While all 45 birthing hospitals have universal screening programs, reporting to the ADHS is voluntary, and not all report. Among the 78,139 births at these 41 hospitals, 76,774, or 98.3% were screened. The best estimate of the numerator for this measure on a statewide basis is 98% of all births: 98,551 x. 983 = 96,876.

Section Number: Screening Programs for Older Children and Women

FIELD LEVEL NOTES

Section Number: I. Unduplicated Count By Race

Field Name: DeliveriesTotal_Asian Row Name: Total Deliveries in State

Column Name: Asian

Field Note:

Wital Records includes "Other Asian and Pacific Islander", which are added to Asian category.

Section Number: I. Unduplicated Count By Race

Field Name: InfantsTotal_All Row Name: Total Infants in State Column Name: Total All Races

Year: 2006 Field Note:

Total all races is the number or babies receiving newborn screening. Race and ethnicity are not captured by the Newborn Screening Program; however, a very high percentage of all births receives newborn screening. Therefore, the number of deliveries receiving Title V services within each racial and ethnic category is estimated to be the total number of Title V served times the percent of all deliveries in the state represented by that racial group.

Section Number: II. Unduplicated Count by Ethnicity

Field Name: InfantsTotal_TotalNotHispanic Row Name: Total Infants in State

Column Name: Total Not Hispanic or Latino

Year: 2006

Field Note:

Title V served for all races is the total number of deliveries in the state plus infants under age one served by clinic or nursing through the High Risk Perinatal Program that were not enrolled in the hospital. This number is higher than the total number of infants estimated to be in the state, which the TVIS program will not allow to be entered because it considers it to be erroneous. Therefore, the number of Title V served is estimated to be the same as the number of infants in the state. However, it is quite possible that there were more deliveries in the state throughout the year than there are infants living in the state at any point in time.

FORM 10 TITLE V MATERNAL & CHILD HEALTH SERVICES BLOCK GRANT STATE PROFILE FOR FY 2006 [SEC. 506(A)(1)]

STATE: AZ

1. State MCH Administration:

The Arizona Department of Health Services was established as the State Public Health Agency in 1973 under A.R.S. Title 36 and is designated as Arizona's Title V Agency. The Bureau of Community and Family Health Services, in which the Office of Women's and Children's Health and the Office for Children with Special Health Care Needs are located, provides policies and standards development, comprehensive planning, community organization and development, training and technical assistance, and direct provision of screening, preventive and curative services. Services provided through the Title V program include, but are not limited to, the statewide Newborn Screening, Universal Newborn Hearing Screening, High Risk Perinatal Services, Children's Rehabilitative Services, community development, Community Grants Initiative, Family Planning, Hotline, Health Start, Medical Home Project, and Traumatic Brain Injury Project.

a. Direct Medical Care and Enabling Services:

(max 2500 characters)

d. CSHCN

e. Others

a. Pregnant Women b. Infants < 1 year old c. Children 1 to 22 years old

OCSHCN provides MCH block grant dollars to fund service coordination for children who are at risk of developmental delays but do not meet the medical or financial eligibility requirements of the AzEIP. Additional block grant dollars, in conjunction with funding from the Governor's Council on Head and Spinal Injuries, and a grant from BHHS Legacy Foundation provide service coordination to children and youth with traumatic brain and spinal cord injuries up to the age of 21. The Community Development Initiative, lead by OCSHCN, builds on 10 years of work with parent leaders and community development at the local level. Through endorsement by the Governor's Office, several state agencies will be incorporating youth and families into their decision-making processes. OCSHCN parent leaders will provide leadership in: training parents, serving as mentors to new agencies and families as they implement a process to identify parents, involving families in the development of policies and procedures, and evaluate the effectiveness of this integration. OCSHCN will be working closely with the community development consultant as all of these activities are implemented. Most of the parent leaders and the organizational support contracts for the community teams are funded by Title V dollars.

7,527

b. Population-Based Services:

(max 2500 characters)

Teen Pregnancy Prevention Health Marketing Campaign: State funds became available in 2004 to address prevention of teen pregnancies in Arizona. Key stakeholders were brought together to help determine the best use for the funds, and a major outcome was a statewide teen pregnancy prevention marketing campaign. The campaign used a poetry jam format in television ads to promote a message of "Respect yourself: abstain or use a condom." The campaign is complemented by the funding of two communitybased projects in locations with the highest teen pregnancy rates. The community-based projects will create a local plan to address teen pregnancy, and then begin implementation of the plan. Newborn Screening: In 2005, the Arizona Legislature enacted legislation requiring the ADHS to specify in rule the disorders to be screened and added the follow up of newborn hearing disorders. This legislature allows for the expansion of the number and type of disorders screened in newborns. Tandem Mass Spectrometry has been added to the methodologies used for newborn screening in Arizona, which vastly increases the number of possible disorders that can be screened. ADHS identifies over a hundred newborns annually through screening, who are ultimately diagnosed with clinically significant disorders. In 2004, the Newborn Screening Program located all of the affected infants and facilitated access to care until assured that the newborns received appropriate needed services. Children with Special Health Care Needs: OCSHCN provides Title V financial support to the Asthma Coalition by funding the executive director position and the development of an annual report with recommendations to the community on how to prevent and treat asthma. The purpose of the Asthma Coalition is to promote asthma education and awareness and promote a community systems approach in assessing and treating asthma. OCSHCN funds the Pinal County Division of Public Health to work with school nurses to implement asthma action plans. Phoenix Children's Hospital receives funding from OCSHCN to developing a model community asthma action plan for some Head Start Programs in Maricopa County

c. Infrastructure Building Services:

Women's Health: OWCH used Title V funds to support the women's health policy advisor to the Governor. The policy advisor, located in the Governor's Office for Children, Youth, and Families, works closely with OWCH on issues such as family planning, teen pregnancy prevention, and preventive health care for women. Major initiatives include development and implementation of activities for Women's Health Week and staffing the Governor's Commission on the Health Status of Women. State Early Childhood Comprehensive Systems Grant: OWCH has collaborated with the Governor's School Readiness Board to apply for and carry out the activities of the State Early Childhood

Comprehensive Systems Grant. The statewide early childhood systems planning initiative is coordinated by the Governor's Office for Children, Youth, and Families' School Readiness Board staff. The School Readiness Board staff. The School Readiness Board staff are working together to implement the health-related recommendations from the Governor's Action Plan. Initiatives include expansion of health screenings for young children and the development of a statewide child care health consultation system. Injury Prevention: OWCH leads the Department's injury prevention efforts through management of the ADHS Injury Prevention Advisory Council and the ADHS Injury Prevention Internal Workgroup. Infrastructure-building activities include leading the update to the statewide injury surveillance and prevention plan, and outreach to new and existing partners throughout the state. In addition, significant Title V resources are dedicated to child car seat safety. Community-based projects funded by Title V typically include training additional people to become certified by the National Highway Safety Transportation Administration for teaching parents/caregivers how to properly install car seats. The OWCH also houses the Arizona Safe Kids Coalition, which is targeting the expansion of new local coalitions and development of existing coalitions. In May 2005, OCSHCN was awarded the MCH Integrated Services Grant and will use Title V dollars to match these grant dollars in the implementation of medical homes in two physician practices and in two school-based clinics, as well as evaluate the use of screening tools.

FIELD LEVEL NOTES

1. Section Number: Performance Measure #2

Field Name: PM02 Row Name: Column Name: Year: 2004 Field Note:

The data reported in 2004 are pre-populated with the data from 2002 for this performance measure.

2. Section Number: Performance Measure #3

Field Name: PM03 Row Name: Column Name: Year: 2004 Field Note:

The data reported in 2004 are pre-populated with the data from 2002 for this performance measure.

3. Section Number: Performance Measure #4

Field Name: PM04 Row Name: Column Name: Year: 2004 Field Note:

The data reported in 2004 are pre-populated with the data from 2002 for this performance measure.

4. Section Number: Performance Measure #5

Field Name: PM05 Row Name: Column Name: Year: 2004 Field Note:

The data reported in 2004 are pre-populated with the data from 2002 for this performance measure.

Section Number: Performance Measure #6

Field Name: PM06 Row Name: Column Name: Year: 2004 Field Note:

Because only one of the States (Maine) met the NCHS standards for reliability for PM 6, the 2002 indicator is the national average except for Maine which has its State value noted. The data reported in 2004 are pre-populated with the data from 2002 for this performance measure.

6. Section Number: Performance Measure #7

Field Name: PM07 Row Name: Column Name: Year: 2004 Field Note:

The source of immunization data is the CDC National Immunization Survey (http://www.cdc.gov/nip/coverage/NIS/01/toc-01.htm). Previously, the reported rate represented the coverage level for 4DPT, 3OPV and 1 MMR only, because data were not reliably available for the full series recommended by the CDC, which also includes 3 doses of Hep B and 3 doses of Hib. No data were available for this measure for 1998, but the data points for 1999 forward have been changed to reflect the full 4:3:1:3:3 series. Performance objectives were also changed to reflect the change in the measure. Estimates for data points are based on reports for the following date ranges:

1999 = July 1998 through Jun 1999

2000 = "2000"

2001 = Jan 01 through Dec 01 2002 = Jul 01 through Jun 02 2003 = Jul 02 through Jun 03. 2004= Jul 03 through Jun 04

The 2004 estimate reflects the immunization status of children by age two for children who were 19-35 months of age, born between August 2000 and November 2002. The estimate tolerates 3.8% error at a 95% confidence level.

7. Section Number: Performance Measure #8

Field Name: PM08 Row Name: Column Name: Year: 2004 Field Note:

2004 data are not yet available. The rate is provisionally set at the 2003 rate until the data becomes available in Fall 2005.

3. Section Number: Performance Measure #9

Field Name: PM09 Row Name: Column Name: Year: 2004 Field Note:

The data source for this measure has been changed. Figures for previous years were from a statewide oral health survey of over 80 communities. The measure for 2004 is based on children in schools from five of the 15 counties in Arizona where at least 65% of the student population in the school are on the Free and Reduced Lunch program. Data is collected on second grade children because physiologically, their average age is the optimum time for sealant placement on first permanent molars. Presence of existing dental sealants is determined at the time of the screening for sealant need, and before any additional sealants are placed. Data reported for 2004 were collected during the 2003-2004 school year and 24% of students were found to have sealants. The same surveillance method on the previous academic year yielded an estimate of 20%.

9. Section Number: Performance Measure #10

Field Name: PM10 Row Name: Column Name: Year: 2004 Field Note:

Data for 2004 are not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data become available in the Fall of 2005. Estimates for 2001 on reflect motor vehicle death rates for all children ages 0-14. Prior to 2001, estimates were based on ages 1-14.

Section Number: Performance Measure #11

Field Name: PM11 Row Name: Column Name: Year: 2004 Field Note:

Source: "Mothers Survey," Ross Products division, Abbott Laboratories, Inc. Data for 2004 not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data become available.

11. Section Number: Performance Measure #12

Field Name: PM12 Row Name: Column Name: Year: 2004 Field Note:

The data reported are estimated based on 41 out of 45 birthing hospitals. While all 45 birthing hospitals have universal screening programs, reporting to the ADHS is voluntary, and not all report. Among the 78,139 births at these 41 hospitals, 76,774, or 98.3% were screened. The best estimate of the numerator for this measure on a statewide basis is 98% of all births: 98,551 x .983 = 96,876.

12. Section Number: Performance Measure #13

Field Name: PM13 Row Name: Column Name: Year: 2004 Field Note:

Data source is http://www.census.gov/hhes/hlthins/historic/hihistt5.html. Data for 2004 not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data become available in the Fall of 2005.

13. Section Number: Performance Measure #14

Field Name: PM14 Row Name: Column Name: Year: 2004 Field Note:

The measure reported is the total number of Medicaid members age 1-20 with at least one paid service during the reporting year divided by the total number of members age 1-20 eligible for Medicaid at any time during the reporting year. A single point-in-time estimate of the potentially eligible population is actually smaller than the number of service recipients yielding a result of over 100%.

14. Section Number: Performance Measure #15

Field Name: PM15 Row Name: Column Name: Year: 2004 Field Note:

Data for 2004 are not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data becomes available in the Fall of 2005.

15. Section Number: Performance Measure #16

Field Name: PM16 Row Name: Column Name: Year: 2004 Field Note:

Data for 2004 are not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data becomes available in the Fall of 2005.

16. Section Number: Performance Measure #17

Field Name: PM17 Row Name: Column Name: Year: 2004 Field Note:

The data source for this measures is birth certificate data for live births. Births in which the birth weight was recorded as being under 450 grams are excluded as a data quality measure, as it is unlikely that these records represent actual birth weights. Only facilities certified by the Arizona Perinatal Trust as level III facilities are included in the numerator. Banner Desert Samaritan became certified as a Level III on 10/1/02. Births occuring there were included in the numerator for 2002 if the date of birth was on or after 10/1/02. Data for 2004 are not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data become available in the Fall of 2005.

17. Section Number: Performance Measure #18

Field Name: PM18 Row Name: Column Name: Year: 2004 Field Note:

Data for 2004 are not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data become available in the Fall of 2005.

18. Section Number: State Performance Measure #2

Field Name: SM2 Row Name: Column Name: Year: 2004 Field Note:

Problems with tabulating hospital discharge data prevented reporting on this measure for 2002. Data for 2004 are not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data become available in the Fall of 2005.

19. Section Number: State Performance Measure #6

Field Name: SM6 Row Name: Column Name: Year: 2004 Field Note:

Beginning with the rate presented for 2003, the preventable death rate is adjusted to factor in an estimate of the number of deaths likely to have been preventable among the cases that were not reviewed. There were a total of 995 resident deaths under age 18 in the state of Arizona during 2003. The Child Fatality Review Team reviewed 904 (or 91%) of the deaths, and found 24.9% of the cases reviewed to have been preventable. There were 91 deaths that the team did not review. Assuming that 24.9% of those cases had been preventable, there would be 23 more preventable deaths (91 x .249 = 22.6; rounded to the nearest whole number=23). These cases are added to the number of 225 reviewed cases found to be preventable + 23 cases among non-reviewed cases assumed to be preventable = 248). Data for 2004 are not yet available. The rate for 2003 is provisionally submitted as the estimate for 2004.

20. Section Number: State Performance Measure #7

Field Name: SM7 Row Name: Column Name: Year: 2004 Field Note:

Problems with tabulating hospital discharge data prevented reporting on this measure for 2002. Data for 2004 are not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data become available in the Fall of 2005.

21. Section Number: State Performance Measure #9

Field Name: SM9 Row Name: Column Name: Year: 2004 Field Note:

Previously, this measure was based on Arizona survey data from 2001 for children age 3 through 20. This estimate is based on National Survey of Childrens Health data, which includes data on children under age 18. Respondents were asked whether children received routine preventive dental services in the last 12 months. Respondents were not asked the question about children who had no natural teeth, or who were younger than age one. To remain as consistent as possible with the previous measure, children younger than age three were excluded from analysis.

22. Section Number: State Performance Measure #10

Field Name: SM10 Row Name: Column Name: Year: 2004 Field Note:

Problems with tabulating hospital discharge data prevented reporting on this measure for 2002. Data for 2004 not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data becomes available in the Fall of 2005.

23. Section Number: State Performance Measure #11

Field Name: SM11 Row Name: Column Name: Year: 2004 Field Note:

Problems with tabulating hospital discharge data prevented reporting on this measure for 2002. Data for 2004 not yet available. The estimate for 2004 is provisionally set at the 2003 rate until data becomes available in the Fall of 2005.

24. Section Number: State Performance Measure #12

Field Name: SM12 Row Name: Column Name: Year: 2002 Field Note:

FORM 14 LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE: AZ FY: 2006

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase ,list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

- 1. Reduce teen pregnancy and increase women's access to reproductive health services
- 2. Reduce obesity and overweight among women and children
- 3. Reduce preventable infant mortality
- 4. Reduce the rate of injuries, both intentional and unintentional
- 5. Increase access to prenatal care among the underserved
- 6. Improve oral health of children, especially among high-risk populations
- 7. Integrate mental health with general health care
- 8. Increase the accessibility and availability of individualized health and wellness resources for children and youth with special health care needs
- 9. Increase the availability of a cohesive and stable continuum of resources within a medical home that includes an improved quality of life approach
- 10. Increase the recognition of families as integral partners in the care of their children's health and wellbeing

FORM 16 STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET STATE: AZ

SP# 1

PERFORMANCE MEASURE: Proportion of low-income women who receive reproductive health/family planning services.

STATUS: Act

GOAL To improve the health status of women of childbearing age (15-44 years).

DEFINITION

Numerator:

Number of women of low economic status (at or below 150% of federal poverty line) age 15-44 who receive reproductive

health and family planning services.

Denominator:

Number of women of low economic status (at or below 150% of federal poverty line) age 15-44.

Units: 100 Text: Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES OWCH Family Planning program data and Family Planning Council data are used for the numerator and Department of

Economic Security Population Statistics estimates are used for the denominator.

SIGNIFICANCE

Title V and Title X family planning clinics provide birth control and other vital health care services to low-income women

and teens including breast and cervical cancer screening, screening and treatment for STDs, HIV and pregnancy testing and counseling, comprehensive physical exams and other primary health care services. Often, family planning clinics are the only source of primary care for women. In 1990, 30.5 million American women were at risk of unintended pregnancy. More than half were low-income teens. If all pregnancies were intended there would be a 45% reduction in births to unmarried women and an almost 90% reduction in births to teens. Unintended pregnancy is a serious public health issue and is costly. Providing family planning services results in substantial savings in both human and fiscal terms. In 1991, the cost of an uncomplicated vaginal delivery was approximately \$4,720, compared to the \$200 per woman per year cost of

contraception (including all related services).

PERFORMANCE MEASURE: Hospitalizations for nonfatal injuries and poisonings per 100,000 adolescents age 15 through 19.

STATUS: A

GOAL Reduce morbidity related to injury and poisoning for children.

DEFINITION Injury and poisonings identified by ICD-9 CM principle diagnosis codes in the range 800-999. Measure is limited to Arizona

injury and post-inings identified by 1602-9 GW principle diagnosis codes in the range 600-999. Measure is limited to Arizona residents.

Numerator:

Number of hospitalizations with a principle diagnosis code in the range of 800-999 to Arizona residents age 15-19.

Denominator:

Number of children 15-19.

Units: 100000 Text: Per 100,000

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES Arizona Department of Health Services Hospital Discharge Data Base for inpatient hospital admissions for numerator; and

Arizona Department of Economic Security Population Statistics Unit for estimate of population for denominator.

Significance

Injury is the leading cause of death among children one year of age and older, both nationwide and in Arizona. Injury accounts for more premature child deaths than all major diseases combined. From 1985-1995, injury accounted for nearly 70 percent of all child and adolescent deaths among Arizonans ages 1-19, and exceeded the rate of child deaths due to

injury for the United States. Many serious injuries do not result in death. Between 1989 and 1992, national data show that for every one child or youth who died from an injury, more than 11 were admitted to a hospital. While there were 1,608 injury-related deaths among children in Arizona from 1989 to 1992, there were 18,873 injury-related hospitalizations during

the same period.

PERFORMANCE MEASURE: Preventable child deaths per 100,000 children under age 18.

STATUS: Active

GOAL To reduce the rate of preventable child deaths.

DEFINITION

Numerator:

The number of deaths for children under age 18 which were determined by the Child Fatality Review Team to be

preventable.

Denominator:

The number of children under age 18. **Units:** 100000 **Text:** Rate per 100,000

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES Primary data source is the Child Fatality Review Team with summary data from death certificates as a comparison source.

An issue is the definition of preventable death which is still evolving and may be further refined by the State Child Fatality Review Team. Although it is the goal of the Child Fatality Review Team to review every death, this has not always been accomplished by the time statistics were produced. The measure for 1996 includes a review of 98.5% of child deaths.

Future measures will include a review of 100% of child deaths.

SIGNIFICANCE

This is a global measure of outcome for all children. Individual programs may target specific causes of child death but this measure looks at all child deaths that could reasonably have been prevented with appropriate intervention. While the

number of children who die is relatively small, it is directly related to the much larger number of children who are harmed by

the same cause.

PERFORMANCE MEASURE: The rate of children 1 through 14 hospitalized for ambulatory care sensitive conditions per 100,000.

STATUS: Active

GOAL Reduce the number of children hospitalized for ambulatory care sensitive conditions through the distribution of public

awareness materials.

DEFINITIONAmbulatory care sensitive conditions include diagnosis codes indicating any of the following: immunization preventable conditions, convulsions, severe ENT infections (suppurative and unspecified of this media, pharvngitis, tonsilitis, URI).

conditions, convulsions, severe ENT infections (suppurative and unspecified otitis media, pharyngitis, tonsilitis, URI), tuberculosis, COPD, bacterial pneumonia, asthma, diabetes, hypoglycemia, gastroenteritis, kidney/urinary infection, dehydration, iron deficiency anemia, nutritional deficiencies, pelvic inflammatory disease, and dental conditions.

Numerator:

The number of hospitalizations for ambulatory care sensitive conditions for children age 1-14.

Denominator:

The number of children age 1-14. **Units:** 100000 **Text:** Rate per 100,000

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES Arizona Department of Health Services Hospital Discharge Data Base for inpatient hospital admissions for numerator; and

Arizona Department of Economic Security Population Statistics Unit for estimate of population for denominator.

SIGNIFICANCE

Ambulatory care sensitive conditions are those conditions which would not have required hospitalization if adequate primary care services had been provided. This issue has both medical and financial consequences as children become sicker than necessary before they get treatment and the cost of treatment in an inpatient hospital setting is far higher than treatment in

a physician's office.

PERFORMANCE MEASURE: Percent of children age 3 through 20 who had their teeth cleaned by a dentist or dental hygienist within the last year.

STATUS: Active

GOAL Increase the proportion of children receiving preventive dental care.

DEFINITION

Numerator:

The number of children age 3 through 20 who are reported to have had their teeth cleaned by a dentist or dental hygienist

within the last year.

Denominator:

The number of children age 3 through 20 living in Arizona.

Units: 100 Text: Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

This measure is estimated from a statewide survey of a representative sample of children living in Arizona.

One of the most significant findings from the year 2000 needs assessment of the MCH population in Arizona was the unmet need for dental services. This measure will track the proportion of children who get regular preventive dentistry. SIGNIFICANCE

PERFORMANCE MEASURE: Child abuse hospitalizations per 100,000 children under age 18.

STATUS: Active

GOAL Reduce the rate of hospitalizations for child abuse among children under age 18.

DEFINITION

Numerator: The number of hospital admissions for child abuse for children under age 18.

Denominator:

The number of children under age 18 living in the State of Arizona.

Units: 100000 Text: Rate per 100,000

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Arizona Department of Health Services Hospital Discharge Data Base for inpatient hospital admissions for numerator. Hospital admissions with the following diagnosis codes are included: 995.5x, E904.x, E968.4, V61.21. The source for the population estimate for the denominator is the Arizona Department of Economic Security Population Statistics Unit.

The Arizona Department of Health Services sought public input from its partners (e.g., community health centers, **SIGNIFICANCE**

adolescent health coalition, foundations, county health departments and other state agencies). Partners were presented with data related to health status indicators, performance measures, and needs assessment. Data were then collected from the partners on what they considered to be critical issues. Two issues emerged as most important: child abuse and violence

against women.

PERFORMANCE MEASURE: Rate of hospitalizations due to violence against women per 100,000 women age 18 and over.

STATUS: Active

GOAL Reduce the rate of hospitalizations due to violence against women.

DEFINITION

Numerator:

The number of hospital admissions due to violence against women epr 100,000 women age 18 and over.

Denominator:

The number of women age 18 and over living in Arizona.

Units: 100000 Text: Rate per 100,000

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Arizona Department of Health Services Hospital Discharge Data Base for inpatient hospital admissions for numerator. Hospital admissions with the following diagnosis codes are included: 995.80, 995.81, 995.82, 995.83, 995.84, 995.85, E960-E969. The source for the population estimate for the denominator is the Arizona Department of Economic Security

Population Statistics Unit.

SIGNIFICANCE The Arizona Department of Health Services sought public input from its partners (e.g., community health centers,

adolescent health coalition, foundations, county health departments and other state agencies). Partners were presented with data related to health status indicators, performance measures, and needs assessment. Data were then collected from the partners on what they considered to be critical issues. Two issues emerged as most important: child abuse and violence

FORM NOTES FOR FORM 21

Except where separate enumerations are available, "Asian" includes Hawaiian and other Pacific Islanders.

HSI#07: There were 5 women of unknown age delivering babies in Arizona in 2003, which were excluded from this table.

HSI #08: Data are from 2003.

HSI #09:

- Percent in household headed by a single parent data are from 2000 Census.
- The number of children in TANF families is unavailable. The number reported is the percent of children enrolled in TANF divided by the total number of all children.
- WIC enrollment by race/ethnicity is not available.
HSI #10: The proportions living in various geographic areas from the year 2000 U.S. Census were applied to the total DES population estimates for 2004 to estimate the numbers living in various geographic areas.

FIELD LEVEL NOTES

None

NEW STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET STATE: AZ

SP# 1

PERFORMANCE MEASURE:

Proportion of low-income women who receive reproductive health/family planning services.

GOAL

To improve the health status of women of childbearing age (15-44 years).

DEFINITION

Numerator:

Number of women of low economic status (at or below 200% of federal poverty line) age 15-44 who receive reproductive

health and family planning services.

Denominator:

Number of women of low economic status (at or below 200% of federal poverty line) age 15-44.

Units: 100 Text: Percent

HEALTHY PEOPLE 2010 OBJECTIVE

9-1

Increase to at least 70% the proportion of all pregnancies among women 15-44 that are planned.

DATA SOURCES AND DATA ISSUES

In an effort to provide a timely and reasonable estimate of the need for family planning services in Arizona, the Arizona Family Planning Council conducts an annual needs assessment. The needs assessment compares the number of low-income women who are potentially in need of family planning services (women 15 through 44 with an income at or below 200 percent federal poverty level who are fertile) to the number of these women reported to receive free or subsidized family planning services through publicly funded resources. Publicly funded service networks work collaboratively with

Arizona Family Planning Council to provide data for this report.

SIGNIFICANCE

Publicly funded family planning services are provided through Title V, Title X, AHCCCS, county governments, and federally-funded community health centers. Services include birth control and other vital health care services to low-

income women and teens including breast and cervical cancer screening, screening and treatment for STDs, HIV and pregnancy testing and counseling, comprehensive physical exams and other primary health care services. Often, family planning clinics are the only source of primary care for women. The 2002 National Survey of Family Growth found that many pregnancies continue to be either mistimed or unwanted. Three fourths of women 25 through 44 years of age intended their pregnancy, while less than one fourth (22 percent) of women under the age of 20 indicated that their pregnancy was intended. For those women under the age of 20, 57 percent said that the pregnancy was mistimed and 22

percent said that it was unwanted.

PERFORMANCE MEASURE: The percent of high school students who are overweight or at-risk for overweight.

GOAL Reduce the percent of high school students who are overweight or at-risk for overweight.

DEFINITIONYouth Risk Behavior Survey calculates body mass index from students' self reports of heights and weights, and categorizes

them using CDC criteria as normal, underweight, overweight, and at-risk for becoming overweight.

Numerator:

The weighted number of students classified as either "overweight" or "at-risk for overweight" in the YRBS.

Denominator:

The weighted number of all students in the Youth Risk Behavior Survey.

Units: 100 Text: 1

HEALTHY PEOPLE 2010 OBJECTIVE

19-3

Reduce the proportion of children and adolescents who are overweight or obese.

DATA SOURCES AND DATA ISSUES

Youth Risk Behavior Survey calculates body mass index from students' self reports of heights and weights, and categorizes

them using CDC criteria as normal, underweight, overweight, and at-risk for becoming overweight.

The National Health and Nutrition Examination Survey found that there has been an increase in overweight 12-19 year-olds from 5% to 16% over the last 40 years. While maintaining a healthy weight is important for people of all ages, being overweight during childhood can carry life-long health consequences. The Surgeon General's Call to Action to Prevent and Decrease Overweight and Obesity states: "Risk factors for heart disease, such as high cholesterol and high blood pressure, occur with increased frequency in overweight children and adolescents compared to children with a healthy weight. Type 2 diabetes, previously considered an adult disease, has increased dramatically in children and adolescents. Overweight and obesity, are closely linked to type 2 diabetes. Overweight adolescents have a 70% chance of becoming overweight or obese

adults."

OBJECTIVE

SIGNIFICANCE

2006 2007 2008 2009 2010

PERFORMANCE MEASURE: The percent of preventable fetal and infant deaths out of all fetal and infant deaths.

Reduce infant mortality by reducing the percent of preventable fetal and infant deaths. GOAL

Using the CDC Periods of Risk Model, excess deaths will be identified by comparing death rates of various subgroups to **DEFINITION**

infant death rates of White women age 20 and older with more than 12 years of education.

Numerator:

Total number of excess deaths identified by the Periods of Risk analysis.

Denominator:

Total number of fetal and infant deaths.

Units: 100 Text: 1

HEALTHY PEOPLE 2010 OBJECTIVE

Reduce the fetal(fetal deaths at 20 or more weeks of gestation) to no more than 4.1 per 1,000 live births, and reduce the

infant mortality rate to no more than 5 per 1,000 live births.

DATA SOURCES AND DATA ISSUES

Arizona infant and fetal death certificates will be matched to birth certificate data using the CDC Periods of Risk Model.

Deaths will be classified into periods of risk by weight and gestational age at the time of death, and excess death rates will

be calculated by race/ethnicity, age, and education level.

Although infant mortality in Arizona has declined, disparities remain in the rates of death among various subgroups of the **SIGNIFICANCE** population. African American, American Indian, and Hispanic infants die at higher rates than White infants, as do infants

born to less educated women and teens. While not all infant mortality can be prevented, disparities suggest that

interventions directed at excess mortality within high-risk populations provide an opportunity for further progress.

OBJECTIVE

2006 2007 2008 2009 2010

PERFORMANCE MEASURE: Emergency department visits for unintentional injuries per 100,000 children age 1-14.

To reduce the rate of emergency department visits for unintentional injuries among children age 1-14. GOAL

DEFINITION

SIGNIFICANCE

Numerator:

The number of outpatient emergency department visits for non-fatal unintentional injuries and poisonings for children age 1-

Denominator:

The population of children age 1-14.

Units: 100000 Text: Rate

Injury/violence Prevention Objective 9 **HEALTHY PEOPLE 2010 OBJECTIVE**

Reduce emergency department visits caused by unintentional injuries to no more than 111 per 1,000 people.

All acute-care hospitals in Arizona, with the exception of federal hospitals (military and Indian Health services), are required **DATA SOURCES AND DATA ISSUES**

to submit emergency room utilization data to the Arizona Department of Health Services twice a year. The population of

children age 1-14 is based on the Arizona Department of Economic Security population projections.

Injuries, both intentional and unintentional, are among the leading causes of death among children of all ages in Arizona. Unintentional injuries, homicides, and suicides accounted for 79% of all deaths among children 1-14 and 75% of deaths among adolescents age 15-19 in 2003. In addition, there were 6,874 inpatient hospitalizations for non-fatal injuries and

poisonings. Thousands more less severe injuries are seen in emergency rooms as outpatients.

PERFORMANCE MEASURE: The percent of women entering prenatal care during their first trimester in underserved primary care areas.

To increase the percent of women entering prenatal care during their first trimesters in underserved primary care areas. GOAL

DEFINITION Underserved primary care areas, for the purpose of this measure, are defined as areas in which fewer than 74 percent of

women received a prenatal visit within their first trimester in 2003.

Numerator:

The number of women in underserved primary care areas who received a prenatal visit during their first trimester of

pregnancy.

Denominator:

The number of women in underserved primary care areas who delivered a live birth.

Units: 100 Text: Percent

HEALTHY PEOPLE 2010 OBJECTIVE

16-6 Increase the proportion of pregnant women who receive early and adequate prenatal care to 90%.

Arizona birth certificate data contains information that allows it to be aggregate into primary care areas. Birth certificates will **DATA SOURCES AND DATA ISSUES** be the source of both the numerator and denominator for this measure.

Prenatal care is an opportunity to identify risks and mitigate their impact on pregnancy outcomes through medical **SIGNIFICANCE**

management. Prenatal visits also offer an opportunity for education and counseling on proper nutrition and risk factors, such as smoking and alcohol use during pregnancy. Prenatal care is more effective when women enter care early in their pregnancy. There are many areas of the state where the percent of women entering prenatal care early lags behind the

statewide average.

PERFORMANCE MEASURE: Percent of Medicaid enrollees age 1-18 who received at least one preventive dental service within the last year.

GOAL To increase the percent of high-risk children who receive preventive dental services each year to 57%.

DEFINITION

Numerator:

Line 12B, "Total eligibles receiving preventive dental services," sum of columns "1-2," "3-5," "6-9," "10-14," "15-18."

Line 1, "Total individuals eligible for EPSDT," sum of columns "1-2," "3-5," "6-9," "10-14," "15-18."

Units: 100 Text: Percent

21-12 **HEALTHY PEOPLE 2010 OBJECTIVE**

Increase the proportion of low-income children and adolescents who received any preventive dental service during the past

DATA SOURCES AND DATA ISSUES AHCCCS produces an annual "Form HCFA-416: Annual EPSDT Participation Report for Funding Source: Title XIX"

containing dental utilization data, including information on preventive dental services.

U. S. Surgeon General David Satcher deemed dental disease the "silent epidemic," yet, it is preventable with early **SIGNIFICANCE**

intervention and the promotion of evidence-based prevention efforts like dental sealants. In an effort to improve health and well being it is imperative that we target interventions at preventing dental disease, especially in high-risk children. Although children enrolled in Medicaid are fully covered for dental services, they often fail to receive preventive dental care.

PERFORMANCE MEASURE: Percent of parents and youth participating with state agencies in community development initiatives who completed the

Parent Youth Training.

GOAL To have all parents and youth participating with state and community agencies to have completed the Parent Youth

Training.

DEFINITION

Numerator:

Number of parents and youth completing Parent Youth Training.

Denominator:

All parents and youth participating with state agencies in community development initiative.

Units: 100 Text: Percent

HEALTHY PEOPLE 2010 OBJECTIVE

16.23

Increase the proportion of states and jurisdictions that have service systems for children with or at risk for chronic and

disabling conditions as required by Public Law 101-239.

DATA SOURCES AND DATA ISSUES

As of October 2005, OCSHCN expects to have access to ADHS e-Learning Management System, which will record access

to the learning modules, completion of the modules, and the results of online competency testing.

SIGNIFICANCE

The Arizona Department of Health Services, Office for Children with Special Health care Needs sought public input from its partners (e.g., community health centers, foundations, county health departments, state and community agencies, providers, and families of children with special health care needs) through a Needs Assessment Planning Group and focus groups composed of family members of children and youth with special health care needs. Participants in these groups were presented with data related to health status indicators, performance measures, and needs assessment. Education of youth, parents, and providers was mentioned as a significant need by both the focus groups and the Needs Assessment

Planning group.

OBJECTIVE

2006 2007 2008 2009 2010

Percent of state agency personnel, community leaders, parents, and youth, participanting in the Integrated Services **PERFORMANCE MEASURE:**

committees, who are satisfied with participation in the committees.

GOAL

DEFINITION

Numerator: Number of activite participants (in denominator) who are satisfied with the activities and outcomes of the Integrated Services

To have 80% of participants satisfied with the committee activities implemented under the Integrated Services Grant.

Committees.

Denominator:

Number of active participants in each of the six committees (Integrated Service Task Force, Specialty Services Committee, Cultural Competency Committee, Quality Improvement Committee, Parent Advisory Board, and Youth Council) for the calendar year.

Units: Text: 0

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

SIGNIFICANCE

Each active member of the committee will be given a satisfaction survey at the end of each 12-month period.

In May 2005, OCSHCN received a three-year MCHB Integrated Services Grant to provide a mechanism to implement

activities to streamline service delivery for children and youths with special health care needs in Arizona.
